Giacomo Mariuzza

AI Developer & Technical Analyst | MSc Student in AI & Cybersecurity

Udine · giacomo.mariuzza@outlook.it · LinkedIn · Website

PROFILE

AI Developer & Technical Analyst working on applied AI solutions for real-world problems, combining software development, technical analysis, client-facing requirements and user experience. I am completing an MSc in AI & Cybersecurity through an international double-degree programme.

SKILLS

AI & DATA

Machine learning, neural networks and feature engineering
Data analysis with Python, Pandas, NumPy, scikit-learn
Local LLMs, OpenAI APIs, chatbots, automations

SOFTWARE

Python, Java, SwiftUI, HTML, CSS, PHP
Web apps, iOS interfaces, offline-first tools
IoT with Arduino, Raspberry Pi, sensors and local storage

METHOD

From unclear needs to technical requirements
Prototyping, testing, iteration, attention to detail
Discretion, organization, client communication

LANGUAGES

Italian: native
English: good
Spanish: intermediate
Japanese: basic

EXPERIENCE

JUN 2025 - PRESENT
Aipertech

AI Developer & Technical Analyst

Development of AI systems for business contexts: workflow automation, document/image analysis, conversational interfaces and technical requirements with clients.

Role across implementation, testing, technical analysis, constraints, accuracy and adoption strategy.

OCT 2025 - PRESENT
UniUD E-Racing

Software Developer

Driverless software in the university E-Racing team: sensors, path planning, detection and vehicle control.

SEP 2024 - JAN 2025
University of Udine

Neural network project - internal university internship

Experimentation with neural models and performance evaluation in an applied academic context.

2016 - 2019
Events and internships

Organizational and IT experience

Hardware/software internship at Thinking Flows SRL; support for Udine3DForum and international basketball events; relational and logistics collaboration.

EDUCATION

IN PROGRESS
Udine / Klagenfurt

Master's degree - Artificial Intelligence and Cybersecurity

International double-degree programme focused on artificial intelligence, machine learning and cybersecurity.

APR 2025
University of Udine

Bachelor's degree - Internet of Things, Big Data and Machine Learning

Thesis: Dal Post al Like: Machine Learning models for predicting Instagram engagement.

JUN 2021
I.S.I.S. A. Malignani, Udine

High school diploma - Applied Sciences

Final grade: 84/100.

PROJECT EXPERIENCE

DEC 2025
Trieste

Hackathon Trieste 2025 - 2nd place, SHIFT

In a team, I contributed to the definition and pitch of SHIFT, a concept designed to reduce

digital distractions and make study sessions more structured.

The solution combined a physical phone slot, white noise, activity scheduling and an active focus mode, with a minimal interface centered on concentration.

2025
Citta Generativa

Hackathon Citta Generativa 2025 - 2nd place, mobilitIAmo

In 36 hours I co-created mobilitIAmo, a smart mobility platform with a real-time multimodal map of buses, taxis, bikes and scooters, plus a local AI chatbot for natural-language questions.

I worked on architecture and integration, with a focus on inclusion, open data, stop accessibility, TPL FVG APIs and scalability.

NOV 2025
Online

PienoFVG - web app for fuel-price comparison and forecasting

Development of a web platform to monitor and compare petrol and diesel prices among fuel stations in Friuli Venezia Giulia (Udine, Gorizia, Trieste) and Slovenia (non-motorway network with regulated prices).

Main features:

- AI model for 7-day price forecasting, useful for evaluating whether postponing refuelling is convenient.
- Automatic price updates: daily for Italy, twice weekly for Slovenia.
- Personalized savings calculator based on starting location, litres entered and available regional discounts.
- Responsive and accessible web interface.

Website: pienofvg.it

2025
Tempo d'Europa

Automatic regulation of hydraulic valves with Q-Learning

Development of a decision-making system based on Reinforcement Learning to regulate pressure in a water network and reduce water losses through Q-tables and trial-and-error learning.

Project presented and exhibited at the Tempo d'Europa 2025 event.

2023 - 2024
Bachelor's thesis

Dal Post al Like - ML for Instagram engagement prediction

Development of models to predict Instagram post engagement, including collection, cleaning and transformation of real data from influencer accounts.

Comparison of Linear Regression, Random Forest and neural network models; evaluation with MAE, RMSE and R2; development of a graphical interface for result visualization and reflection on ethical and social aspects.

MAY 2026 - PRESENT
Personal project

Netto - personal finance iOS app

Offline-first iOS app in SwiftUI to track expenses, income, investments and local summaries, with a minimal, dark and clean interface.

Driving licence B - Own car

I authorize the processing of my personal data contained in this Curriculum Vitae pursuant to EU Regulation 2016/679 (GDPR) and Italian Legislative Decree 101/2018 for recruitment and selection purposes.
